Exercise:

**CRITICAL INFRASTRUCTURE SYSTEMS IN THE ERA OF
ARTIFICIAL INTELLIGENCE
"ATTACK SCENARIO AND RESPONSE TO CYBER INCIDENTS"**

Dear Sir/Madam,

**The Center for Risk Analysis and Crisis Management, together with the
National CERT of the Republic of Serbia and the Cyber Security Network
Foundation**, is pleased to announce a cyber incident response exercise. The
exercise will be held on **October 18th 2024, as part of the International
Conference "Critical Infrastructure Systems in the Era of Artificial
Intelligence."**

This exercise will, for the first time, integrate the technical, organizational, and
communication aspects of incident response, with role assignments based on
participant affinities. Therefore, representatives of critical infrastructure systems can
participate in the exercise regardless of their field of education. Accordingly, the aim
of the exercise is to provide participants with an understanding of the complexity and
various aspects of incident response, as well as to emphasize the importance of
collaboration among participants.

The exercise is primarily intended for representatives of critical infrastructure
systems, but it will also be beneficial for anyone involved in the incident response
process within their organization. **Interested participants should register as soon
as possible, and no later than September 13, indicating whether they are
interested in a technical or organizational role in the exercise.** After registration,
participants will receive an additional questionnaire to determine their precise role in
the exercise.

The organizers reserve the right to select candidates in case of a large number of
registrations. All candidates will receive timely information about the exercise and
their role after registration.
